## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In view of the disclosure one skilled in the art cannot make and use the invention due to no details on how to one discriminates whether the recording/reproducing apparatus is in a recording mode or reproduction mode. The specification states on Page 6 Line 25 – Page 7 Line 9 “ When bit signal is detected the detected bit signal is compared with the multiplexed bit signal (multiplexed by synthesizing portion 111) (step 2). When the bit signal cannot be detected or when the detected bit signal and the set bit signal continuously coincide by a length of a few fields, the video switching apparatus is set to the recording mode (step 3 and 5). When the detected bit signal and the set bit signal do not coincide, the video switching apparatus 1011 is set to reproducing mode (steps 3 and 4)”.

The lacking details of continuously coinciding with set bit by “a few fields” does not allow examiner to understand how the bit signal is compared to determine

reproduction or recording mode and thereby ultimately determining the position of the video switch. Although, illustration of the apparatus in Figure 1 element 105 and method in Figure 2 Step 2 & 3 the lacking details in the specification and claims enables examiner to make or use the invention.

### **Conclusion**

The prior art made of record and not relied upon are considered pertinent to applicant's disclosure.
